

PrO-Research

By Centurion Scientific Ltd

25 years of
Excellence

Benchtop Centrifuges

Welcome to our new PrO-Research range.

Designed with Research Scientists, we offer state of the art centrifuges for R&D. Derived from our LCD display centrifuges spanning over 25 years of Centrifuge manufacturing. True research centrifuges, allowing you to program 108 memory's of Speed to **1** Rpm difference or Rcf (G) and time to within **1** second, or use the **W2t**, normally found on Ultracentrifuges.

Allowing excellent separations time and time again, or use it to research the best methodology

See Page 23 for further details

Ambient

Designed to keep sample heating to a minimum, our **"Through flow air system"** is unsurpassed. Thus keeping not only the samples cool, but the motor too, allowing , if necessary, long run times.

Feature count is the best for your various needs

Refrigeration

Our Latest **"Dynamic efficiency control system"** derived from our long running LCD series is now available to meet the needs of the market.

Our aim with all our Refrigeration Systems was to reduce power by 25% and was easily achieved.

New thicker stainless bowls and improved heat exchanger, with larger, yet more efficient compressors and condensers.

Our control is unsurpassed, by using bypass hot gas, against its own cooling we can control to levels beyond our competitors, who simply switch the fridge on and off.

A new, next generation PID control software system adds to the control too.

A body redesign has resulted in a simple access panel , should any Mains voltage control parts need servicing.

Rotors

We are aware of the needs of longevity and the need for corrosive or chemical resistance is paramount. NOTE all bowls in the Centrifuges are stainless steel (salt saturation tested). To this end our fixed angle rotors are CNC machined from polypropylene as are the adaptors, giving the best strength and chemical resistance for your needs.

Our swing out rotors and high speed rotors are made from aircraft grade high strength aluminium and then double anodised for protection.

As a manufacturer we are aware of your different needs, If you have such requests, please call us, if possible we can specialise or add a rotor from another range to assist.

From the start of 2014 all Centrifuges and rotors carry a 3 year warranty

That is how confident we are of our Quality and resilience

Please see our Features page for more information on this range Page 3

Centurion Scientific Ltd

PrO-Research Centrifuges

Welcome to our latest range, we trust you will find the following pages informative. With time comes experience and in our 24 years we have learnt that development is an ongoing sequence that is led by materials and analytical changes in the world. To this end, our development has improved user use, sample integrity and access. By working with all our suppliers, our reliability has been retained and improved to give all our range a **3 year warranty** as standard.

CE marked and ISO 9001 regulated and now IVD certified too

User features to PrO-Research	Advantages
Large LCD display with touch control	Clarity & ease of use
Rotor recognition	Safe selection of rotors
10 acceleration rates 10 deceleration rates	Sample assistance
108 memory (12 pages of 9)	Multi department & users
Timer 0-9999 minutes & Hold in 1 second increments	Total flexibility
Pulse short run	Fast pelleting
Run in Speed (Rpm) or Rcf (G) in 1 Rpm increments	Accuracy
W2t Plots Time, Accel, Rpm and Decel	True sample repeatability
Sound <60Db (rotor dependant)	Quiet
Orientation acceleration rate	Prevents initial sample side deposits

Standard to PrO-Research	Advantages
Extra thick Stainless steel bowl	Easy clean & rust free
Port to lid	Tachometer speed certification
Alloy & steel frame with composite's	Strong light & quiet
World leading Industrial grade Inverter	Reliability & strength
Best Quality European Brushless motor	Quiet, cool & reliable
High technology airflow (ambient models)	Cooler running
All centrifuges have user accessible service sections to access all safety parameters	

Safety features to PrO-Research	Advantages
Multi point lid locking	Lid safety
Emergency lid release	Power failure release
Lid gas struts	Lid dropping safety
Lid lock detection	To run Lid must be shut
Imbalance detection	Easy "eye" volume loading
Overspeed Sensor	Safe detection of speed
Set inverter values	Electronic safety of speed
Barrier ring	Extra metal protection of chamber
Motor overheat sensor	Safe motor protection

Refrigerated PrO-Research	Advantages
Variable from -9 to +40°C with stand by cooling	Flexibility (see rotors)
CFC free R404A gas	Ozone friendly
Valve control of Gas	Efficient temperature control
PID control of valve	Supreme temperature accuracy

Centurion Scientific Ltd centrifuges comply to all relevant EU standards for Quality and medical Devices IEC 61010 and CE conformity test marks Emission, immunity to EN/IEC 61326-1, Class B

Note:- We cannot be held responsible if the tube manufacturers change design and/or size of the tube.

* Limited capacity with sealed bucket lids (B5419 and B5319).

2014 Refrigerated Centrifuges temperature control

At Centurion, we have taken temperature control seriously. We keep the refrigeration unit in the refrigerated centrifuges running constantly, as this not only gives the compressor a longer and reliable life, but stops the constant surges of start up power.

Due to the fact that the refrigeration unit is running constantly it is quit usual to see ice in the chamber even at above 0°C temperatures.

For 2014, a new larger, yet more efficient CFC free compressor has been used which also gives lower power needs.

To maintain the temperature, we have a highly efficient compressor gas bypass solenoid valve, where we pulse heat via a highly accurate controller system (PID controller, which calculates and manages the temperature). By running both in conjunction with each other gives better overall temperature control, achieving the desired set temperature.

Imagine using a shower: you turn on the both the cold and hot water, adjusting to suit your desired temperature. You would not want to use one where you had to stand under the cold water, then the hot, then the cold in order to regulate the temperature.

Centurion has a set temperature of 3°C, and our competitor of 4°C.

This allows us to separate the target areas, to show how each machine regulates the temperature. Both refrigeration units use the same air probes, temperature units, and have the probes set at the same distance from the rotor, and finally, the correct vertical distance to the optimum the tube area. But as you can see, we control to 0.5°C, whereas our competitor controls it to 3.5°C, the Centurion's control is unsurpassed, and our competitor's, which all use the same method of turning the compressor on and off, is shown to have very poor control.

Having the temperature being so controlled means that the Centurion's power usage is less, and the compressor lasts longer.

This system has been in use for over 20 years, so we do know the longevity of our products.

Require complete accuracy with your samples? Purchase a Centurion Centrifuge for total peace of mind. Tried, tested and proven as one of the most accurate systems in the market place.

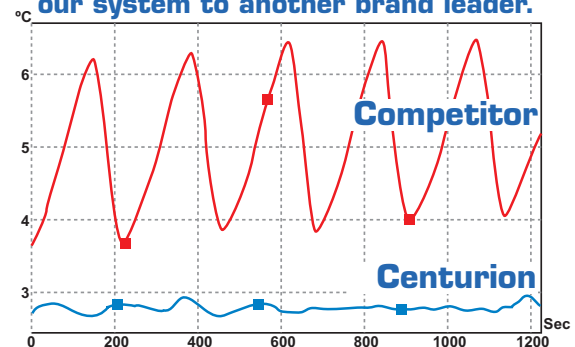

W2t

This is a method of replicating runs, but changing the parameters to suit your sample. Example, you find the speed rate or Rcf is too high and cells rupture , or acceleration rate too high and proteins are sticking to the tube sides. Or maybe you find the run time, simply too long and wish to increase the speed.

Please look at the W2t graphs below. As you can see it maps the area of acceleration to speed, the time actually at speed and a proportion of deceleration time.

Please see the graph that compares our system to another brand leader.

By finding a suitable set of run parameters , taking a note of the W2t on the screen. You can then make a program with that figure.

This time you can change any parameter , acceleration rate, speed/Rcf , time and Deceleration rate. Simply press start the system will adjust the time needed and as it progresses the W2t figure on screen will reduce till zero then brake to a stop. Or you can use this methodology to copy your runs time after time for true repeatability
